
Where is DocBanq Lite supplied from?

Posted by Mario Boutet - 2008/01/22 21:42

DocBanq uses a number of data centres in the US and Australia to deliver the service. DocBanq manages all the hardware, software, backup and security within our data centres and we hold your documents on your behalf.

DocBanq uses similar levels of encryption and security commonly used for Internet banking.

DocBanq Lite is managed by dedicated professionals who focus on managing the reliability, security and availability of your data using industry best practice. The availability of DocBanq Lite exceeds 99.99%.

Of course, the largest organisations require the highest levels of availability and redundancy to meet their operational and audit requirements. For more information, please contact us about DocBanq BPO.
