
Can't find documents using 'document text search'.

Posted by Mario Boutet - 2008/01/23 16:30

The 'document text' search criteria of DocBanq allows users to find documents based on words contained within the documents. However, the body text of documents is processed by the search text indexer from midnight on the day documents were added to DocBanq or modified. Therefore, documents added to DocBanq can be retrieved by searching on 'document text' the next day.

All other searches can be performed immediately once documents are in DocBanq.
